Professional Summary

Detail-oriented Information Science undergraduate with a strong foundation in SQL, Python, Power BI, and Excel for data analysis, business intelligence. Proficient in data cleaning, exploratory data analysis, SQL-based analysis, and interactive dashboard development. Hands-on experience with full-stack web development integration through industry internship. Passionate about transforming raw data into actionable business insights and seeking an entry-level Data Analyst role.

Experience

MEVI Technologies

Jan – May 2026

Django Full-Stack & AI-Powered Application Development Intern

Bengaluru, Karnataka

- Engineered Django-based web applications using Python and MySQL, supporting full CRUD functionality and database integration.
- Implemented RESTful API endpoints, improving data handling efficiency and enabling seamless frontend-backend communication.
- Optimized backend modules and collaborated with senior developers to enhance application performance and code quality.
- Executed functional and integration testing to validate data integrity, API reliability, and overall application stability.

Projects

Retail Sales Analysis | SQL, Python, Power BI, Excel

- Designed and executed SQL queries for data cleaning, transformation, and business analysis on large-scale retail sales datasets. Conducted exploratory data analysis (EDA) using Python (Pandas, Matplotlib, Seaborn) to uncover sales trends, customer segments, and revenue drivers.
- Built an interactive Power BI dashboard visualizing KPIs, regional sales performance, and product profitability to support executive reporting.
- Integrated SQL, Python, and Power BI into a complete end-to-end analytics pipeline, demonstrating a production-ready business intelligence workflow.

Food Waste Management Web Application | Node.js, Express.js, EJS, MySQL, Google Maps API

- Developed a full-stack web application connecting food donors with recipients, implementing user authentication, CRUD operations, and booking workflows.
- Integrated Google Maps API for real-time location selection and address autofill, enhancing usability and reducing user friction.
- Designed and managed a normalized MySQL database schema to support efficient user, donor, and transaction data storage. Delivered a responsive, accessible UI that improved platform usability and supported the application's social impact mission.

Skills

Programming Languages: Python, SQL, JavaScript

Data Analytics: Power BI, Excel, Pandas, NumPy, Matplotlib, Seaborn, EDA

Databases: MySQL

Web Technologies: HTML, CSS, Node.js, Express.js, EJS, Django, REST APIs

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook

Education

Maharaja Institute of Technology, Mysore

2022 – 2026

Bachelor of Engineering – Information Science CGPA: 8.5/10

Mysore, Karnataka

Mandavya Excellence PU College, Mandya

2020 – 2022

Pre-University Certificate (PCMB) — 76%

Mandya, Karnataka

Certifications

Data Analyst Bootcamp 2026 – Alex The Analyst
